

PROJECT NAME: Taylorsville Emergency Operations Center

RECIPIENT: Taylorsville City

LOCATION: Taylorsville, Utah

PURPOSE: The City of Taylorsville lies geographically in the center of Salt Lake Valley and is the most densely populated community in the state of Utah. Unfortunately, four fault lines exist within the City's boundaries and the community leaders do not believe the City Hall will survive a sizable earthquake. Therefore, in order to conduct emergency operations in the hours and days immediately following a man-made or natural disaster the city requires a survivable emergency operations center. As the Committee well knows, the Department of Homeland Security and the Federal Emergency Management Agency have stated emergency operations centers are essential element of a comprehensive national emergency management system and are essential to ensure the continuity of governmental and rescue operations after a major disaster.

AMOUNT: \$850,000
